About Me

As a skilled data analyst & machine learning practitioner, I have worked on various projects in Kaggle. For me, working with data is not just a profession but a passion, and I enjoy exploring and discovering insights hidden in data sets. With expertise in Advanced Excel, Machine Learning, Power BI, SQL, and Business Administration, I have a comprehensive understanding of data-driven decision-making, which enables me to deliver valuable insights and solutions to complex business problems.

Projects

COVID-19 Cases, Deaths and vaccination Data Analysis and EDA

EXTRA-CURRICULAR

My project contains Python code for analyzing COVID-19 data from various sources, including John Hopkins University and Our World in Data. The code retrieves and cleans the data to provide insights on the global spread of the virus, including daily and total cases, deaths, and vaccination rates by country. The analysis includes visualizations such as line plots and choropleth maps. Contributions are welcome.
